

DIS Admin Workflow – Enterprise Onboarding Orchestration

This document defines the DIS Admin workflow for the cloud onboarding orchestration platform. The workflow includes assignment management, onboarding monitoring, intervention handling, approval tracking, escalation management, and operational coordination.

1. Purpose

DIS Admins act as operational SPOCs for onboarding workflows. They monitor onboarding progress, coordinate with users, track approvals, intervene in issues, and manage operational escalations. DIS Admins are not approval authorities and cannot initiate onboardings.

2. Role Architecture

Requester/User: Creates onboarding requests and responds to comments.

Super Admin: Receives onboarding automatically after cloud selection and assigns DIS Admins.

DIS Admin: Operational coordinator for multiple onboardings.

External Approval Teams: Governance, ISM, GPS, and RFC approval owners.

3. Assignment Workflow

User selects cloud provider → System auto-routes onboarding → Super Admin receives onboarding → Super Admin assigns DIS Admin → DIS Admin becomes SPOC for the onboarding.

4. Admin Responsibilities

- Monitor assigned onboardings
- Track workflow progression
- Coordinate with users via comments
- Monitor external approvals
- Escalate blockers and SLA breaches
- Track Service ID creation and RFC progress
- Support users during onboarding

5. Admin Workflow Steps

Step 1 – Assignment Received: Admin receives onboarding assignment.

Step 2 – Initial Review: Review project details, architecture, resources, and environment.

Step 3 – User Coordination: Raise clarification requests or issue comments.

Step 4 – Architecture Monitoring: Track uploads, generated architecture, and compliance concerns.

Step 5 – Recommendation Monitoring: Validate AI-generated GPS/RFC recommendations.

Step 6 – Approval Tracking: Monitor Governance, ISM, GPS, and RFC approval progress.

Step 7 – Escalation Management: Escalate overdue or blocked requests.

Step 8 – Service ID Monitoring: Track provisioning lifecycle.

Step 9 – RFC Tracking: Monitor RFC implementation and closure.

Step 10 – Operational Closure: System marks onboarding completed after all conditions are met.

6. Status Model

Draft, Submitted, Under Review, Pending Governance, Pending GPS, Pending ISM, Pending RFC, Architecture Issue, User Action Required, On Hold, Service ID In Progress, RFC In Progress, Completed, Rejected, Escalated.

7. Approval Ownership

DIS Admins do not approve requests. Approval ownership belongs to external teams: Governance Team, ISM Team, GPS Team, and Change/RFC Management Team.

8. Communication Model

The platform supports comment-based communication between users and DIS Admins. External coordination can occur through Microsoft Teams.

9. Dashboard Features

DIS Admin Dashboard:

- Assigned onboardings
- SLA tracking
- Pending approvals
- Escalation queue
- Comments feed
- Blocked requests monitoring

10. Permission Matrix

DIS Admins can: - View assigned onboardings - Add comments - Request clarification - Monitor approvals - Track Service IDs and RFCs - Escalate issues
DIS Admins cannot: - Approve governance or ISM requests - Reassign onboardings - Create onboardings - Delete onboardings

11. Enterprise Workflow Summary

Requester/User Portal → Workflow Engine → Super Admin Control Layer → DIS Admin Operational Layer → External Approval Systems → Provisioning & RFC Systems.

Status Model Table

Status	Description
--------	-------------

Draft	User started onboarding
Submitted	Current step submitted
Under Review	Admin monitoring workflow
Pending Governance	Awaiting governance approval
Pending GPS	Awaiting GPS approval
Pending ISM	Awaiting ISM approval
Pending RFC	Awaiting RFC approvals
Service ID In Progress	Provisioning in progress
Completed	Onboarding completed
